How do we make such tools accessible to patients?

PatientKind.org

Discover your community, no diagnosis necessary

Sign up

Log in

1. Add symptoms, genes, diagnoses

Q sore back

Back pain

Irregular hyperpigmentation of back

Low back pain

EEG with 4-5/second background activity

Pressure ulcer

"sore back" (nonstandard term)

2. Find people and advocacy organizations that are similar

Lessons learned

- Patients and advocates were incredibly generous with their time and energy
- The tool required more expertise than many patients had
 patient-friendly symptom terminologies would have helped (now available)
- This pilot would have been more successful if I had involved patients in the process sooner and more deeply
- I was a grad student and had no idea how to engage with patients as a researcher #HowNotToDoPtEngagement

The birth of the **new** RareConnect.org

The birth of the **new** RareConnect.org

The birth of the **new** RareConnect.org

Goals

- Modernize the platform
- Mobile-friendly
- APIs to enable data interoperability
- Enable patients to share data with researchers
- Provide more support for undiagnosed patients through matching

What is RareConnect.org?

A **moderated** support platform where rare disease patients, families, and patient organizations can develop **online communities** across continents and languages

How does it work?

- Create a profile
- Join communities
- Start a discussion
- Share your story
- Meet and connect with others

Moderators and managers

RareConnect Managers

Community Moderators
