BREAKOUT SESSION 4

Moderator: Prof. Eileen Treacy, MD, FRCPI, FRCPC, FCCMG
National Clinical Programme for Rare Diseases, Ireland
Let's make a pact to ensure Patients’ sustainable access to rare disease therapies

Pillar 4

A continuum of evidence generation linked to healthcare budget spending

‘The reduction of uncertainties is an essential need, not only for national healthcare systems but also – and to a not less important extent for patients and clinicians’

Eurordis Ambitions

- 3-5 times more RD therapies approved per year
- 3-5 times cheaper than now by 2025
- The right therapeutic option for the patient, not the ‘disease’
- Decrease inequities to access across Member States
Session 4 Aims:
To address some of the challenges and barriers to approval for access and reimbursement of Orphan Medicinal Products in the post-approval phase

How can we measure the required meaningful health outcomes for patients to enable informed reimbursement decisions?

- What can be the role of Patient Centred Outcomes Measures (PCOMs) (or PROMs)?
- **Speaker:** Dr. Thomas Morel, Director Patient-Centred Outcomes Research & Policy, UCB
- How to involve multiple stakeholders in data sharing and ways to facilitate this collaboration?
- What are the realistic expectations of risk-sharing reimbursement models?
- **Speakers:** Dr. Diego Arduci, R&D Rare Diseases Unit Head, Chiesi Pharmaceuticals, IRDiRC
- Josie Godfrey, Director Zebra Consulting (‘Hercules’, DMD-UK)

**Rapporteur:** Chris Sotirelis, EMA and Eurordis Patient Advocate
IRDiRC Vision 2018
(Austin C et al, Clin Transl Sci, Jan 2018)

1. All patients with a suspected rare disease will be diagnosed within 1 year if disorder is known in the medical literature
   ▪ Undiagnosed individuals will enter a globally coordinated diagnostic and research pipeline

2. 1000 new therapies for rare diseases will be approved

3. Methodologies will be developed to assess the impact of diagnoses and therapies on rare disease patients
   ▪ Measure access, impact, effectiveness in real world settings

To see that these new efficacious therapies lead to ‘real benefits’ for patients

Highlights need for INFRASTRUCTURE:

➢ Clinical Practice Guidelines, Outcome Registries and CDEs, Regulatory Policies, Education
What matters to Patients

Patient Reported Outcomes

WHO Definition of Health

"State of complete physical, mental, and social well being, and not merely the absence of disease or infirmity."

“You have to learn about thousands of diseases, but I only have to focus on what’s wrong with ME! Now which one of us do you think is the expert?”
EURORDIS Position Paper 2011

Patient Priorities for Rare Diseases Research, 2014-2020

Most urgent priority: *Translating research into therapies*

Barriers:

Lack of basic knowledge of the causes of rare diseases

Knowing what outcomes to study

Finding the rare patients

Determinants of success in Rare Disease Research:

- Patient Organisations
- Patient Registries
- International Networks - European Reference Networks
Low statistical power from small studies and few patients
Endpoints: Surrogate Biomarkers vs. Clinical Relevance
Unknown long term experience
Genetic heterogeneity
Inadequate Registries (Bouvy et al, 2017)

Research required to generate evidence and compare effectiveness
IRDiRC ‘Building Blocks’
RD professionals and patient participation in OMP assessment

Outcome Registries, PROs and Core Datasets (CDEs)
Risk-sharing schemes during data collection
EU-wide discussions on the balance of long-term effectiveness vs price
25 year Response to Treatment of Rare IMDs

- Effect on biological selection
- Longevity
- Reproductive capability
- Effect on development
- Somatic growth
- Intellectual development
- Effect on social adaptation
- Learning handicap
- Work handicap
- Cosmetic impairment
Progress to date-(Eurordis 2018 Position Paper)

Challenges

- Long-term sustainability of national health funding systems-cost of developing OMPs
- Differences in patient engagement and systems across MS
- Small patient numbers, statistical power of studies - genetic heterogeneity
- Accessing and sharing ‘fit for purpose data’, Conflict of Interest, IP
- Need for new ecosystem for payer-industry relations

Opportunities

- European Joint Programme on Rare Diseases and ‘FAIR’
- Involvement of Patient Advocacy Groups to develop patient orientated evidence (PROMs, PCOMs)
- European Reference Networks-opportunity to create outcome registries (e.g. ERKNet, Haemophilia, Cystic Fibrosis, CTSR, GalNet)
- ‘STAMP’, EMA Registry initiative and cross-European cooperation for value assessments
- IRDiRC Toolbox
- Public-Private partnerships
Thank you for your attention

Breakout Session 4
